

Mould Action

Pre-Paint Treatment

- Non-corrosive
- Bio-degradable
- Works on all surfaces
- Safe to humans and plant growth
- Does not contain ammonia or formaldehyde

AVAILABLE SIZES:
750ml, 1 litre, 4 litre

Mould Action is a very effective low toxicity wash which will kill all existing mould bacteria and spores.

Mould Action should be painted, swabbed or sprayed over the **entire** area to be painted, **not just the area where mould is visible**. Mould spores are minute and may be present even when not visible.

Mould contamination on any surface to be painted must be completely killed before a re-coat of new paint is applied, otherwise the mould will continue to grow. Most additives prevent the growth of mould but do not kill any mould already present.

To ensure thorough elimination of any growth, **Mould Action** should be allowed to remain on the surface for 24 hours. This is the time required for proper and complete penetration of the pores of the substrate where mould bacteria may be located.

After that time all the present debris must be removed by brushing, washing, hosing or better still - with a high pressure washer. This is necessary to ensure a clean surface and to avoid any paint adhesion problems. Painting should then take place within 24 hours and when the surface is dry.

To prevent the re-growth of mould on the newly painted surface just add some VC175 Tropical Mould Killer to the paint for long term protection.

Mould Action is based on a formulation originally developed for the Singapore market known for its high humidity and is one of the most effective mould removers available.
